PROFILE

Goal-oriented 4th-year Artificial Intelligence & Data Science student with a strong foundation in Machine Learning and Deep learning. Proven ability to develop deep learning models, including a CNN based Facial Emotion Recognition system with real-time inference using OpenCV and TensorFlow. Proficient in Java, machine learning and deep learning with a track record of academic excellence (8.6 GPA) and NPTEL certification in Machine Learning. Eager to contribute technical expertise and analytical problem-solving skills to drive innovation in a professional technology environment.

SKILLS

Technicals Skills

- Languages & Frameworks: Java (Core Java, Spring Boot), SQL (MySQL).
- Machine Learning & Deep Learning: Model development (Python, Keras), deployment (Streamlit).
- DevOps: Linux (Ubuntu), Containerization (Docker), Version Control (Git/GitHub), CI/CD Pipelines (GitHub Actions) and Cloud(AWS-EC2,security groups)

Tools

- IntelliJ - Java
- GitHub - CI/CD
- VScode - Python & Machine learning

PROJECTS

UPI dept management system

Developed a UPI-inspired debt settlement system using Spring Boot with 3-layer architecture (Controller, Service, Repository). Implemented a Greedy Algorithm to compute the minimum transactions required to settle group debts by calculating net balances and optimally matching creditors with debtors, replicating Splitwise's "Simplify Debts" feature. Exposed RESTful APIs for debt management and persisted data using Spring Data JPA with H2 in-memory database.

CERTIFICATIONS

- Claude 101
- Artificial Intelligence and Machine Learning(Excaim)

EDUCATION

National College of Hr.sec School
